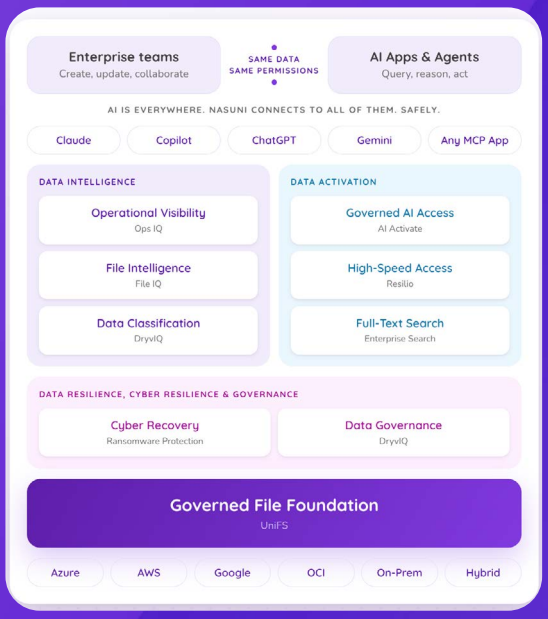
nasuni

Bring data to people wherever work happens. **Bring AI to the governed data wherever it lives.**



Three pressures. **One architecture.**

Every enterprise is facing three pressures at once. Infrastructure costs keep climbing as the AI buildout consumes the memory, flash and compute that storage depends on. Teams need to work faster, from more places, on larger and more complex files. And AI pilots that went well are stalling in production.

The honest reason is that the data was never ready. It is scattered, unclassified and ungoverned, and security can't yet answer what an agent can see or who controls the permissions. Paying to maintain legacy infrastructure while building something new for AI? Those economics don't work. You need one architecture that does both.

ONE GOVERNED COPY. WHEREVER THE BUSINESS NEEDS IT.

The operational file data platform for the AI era. Nasuni runs on one cloud-native file system with a global namespace, immutable versioning, native permission enforcement and customer-owned object storage. Built to bring data to people wherever work happens, it is exactly the architecture enterprise AI needs.

REDUCED COSTS. LOWER RISK. BETTER RETURNS.

Replace hardware sprawl with one cloud-native foundation. Recover from ransomware in minutes, not days. Know what is sensitive, valuable and redundant. Find the right file in seconds. And connect the AI apps you already use to your operational file data, with permissions enforced before the model touches a file, and fewer tokens spent searching.

75%

prioritize AI-ready data investments

Gartner, How to Architect Your Enterprise Data Stack for AI at Scale, July 2026

57%

of AI projects miss objectives

Nasuni, State of Enterprise File Data 2026 (n=1,000).

Know your data first. Then put it to work.

Start by understanding the file data you already have, on the storage you already run. Then manage, protect, and activate it across the business.

1 PREPARE

Know what you have.
Keep what matters.

- Data footprint discovery
- ROT identification & lifecycle cleanup
- Content intelligence & classification
- AI-ready dataset curation

What you get

A clear map of your file data and a smaller, cleaner estate, before a single file moves.

SEE CLEARLY

↓ GROW INTO THE PLATFORM ↓

THE NASUNI FILE DATA PLATFORM

2 MANAGE

Simplify how you store and manage it.

- One global namespace
- Less infrastructure complexity
- Hybrid cloud flexibility
- Customer-owned object storage

What you get

One place for file data across every site and cloud, with fewer systems to run.

SPEND WISELY

3 PROTECT

Govern continuously.
Recover with confidence.

- Architecture-level permissions
- Automated Governance
- Immutable file history
- Cyber resilience
- Rapid recovery

What you get

Protection built into the architecture, so recovery is fast and predictable.

CREATE SAFELY

4 ACTIVATE

Put proprietary data to work for people and AI.

- High-speed distributed access
- Enterprise Search
- AI Activate via MCP
- Efficient indexed retrieval

What you get

People find what they need fast, and AI works from trusted, governed data.

WORK SMARTER

THE OPERATIONAL FILE DATA PLATFORM FOR THE AI ERA

Not a feature comparison. An architecture comparison. Bolt point products together and you get multiple copies, permission models and gaps between every layer. Nasuni does it all from one namespace and one set of permissions.

Your teams or your AI?
You don't have to choose.

Talk to your Nasuni account team about your file data journey, or see what's new at nasuni.com/platform.

nasuni

Nasuni is an AI infrastructure company purpose-built for unstructured data. The Nasuni File Data Platform manages, protects, and activates the operational file data where enterprise work happens, providing one secure, governed foundation for enterprise teams and the AI that supports them.

Built on Nasuni's unique cloud-native file system, the platform creates a single global namespace across cloud and edge. It combines enterprise scale, cyber resilience, content intelligence, high-performance access, and secure AI activation to help enterprises lower costs, reduce risk, improve productivity, and unlock more value from their proprietary data.

Nasuni is trusted by more than 1,300 enterprises worldwide and has a 98% customer satisfaction rating. Learn more at www.nasuni.com.
