

Working in partnership with trusted cloud storage providers, Nasuni delivers unlimited file storage and complete protection from a single virtual file server. Our server, the Nasuni Filer, leverages the vast capacity of the cloud to store and protect your files offsite, while retaining the local functionality and performance of a traditional NAS.

Nasuni radically simplifies the storage and protection of your business files.

- All-in-one file storage and protection
- Choice of trusted cloud providers
- Compatibility with Windows™ shares
- Full Active Directory integration
- End-to-end encryption
- Pay-as-you-go
- Simple billing and full support
- Try and buy

FEATURES

Automatic provisioning: Nasuni delivers unlimited storage in the cloud from trusted cloud storage providers. Capacity expands automatically.

Snapshot file protection technology: Synchronous, deduped snapshots are saved to the cloud. Roll back to any point in the life of a file, directory, or file system.

Fast restore: With credentials, you can reconnect to the cloud and initiate a restore from any location. During a restore, the Nasuni Filer becomes operational immediately.

High-performance caching: The Filer's large, user-defined cache keeps copies of the working set in your local storage infrastructure, for fast offline access.

End-to-end encryption: The Filer encrypts data at your premises. The data remains encrypted in the cloud. Escrow decryption keys with Nasuni or a trusted third party, or generate and store your own.

BENEFITS

- No storage provisioning is needed.
- Capacity adjusts in line with your needs.
- Eliminates the problem of under-utilized hardware.
- Pay only for what you use.

- Easily find, view, and recover files from any point in their history.
- Restore files or whole directories instantly.
- Eliminate backup and restore schemes for files.

- Maintain business continuity in the event of any major data center failure or natural disaster.
- Save money by maintaining user productivity.

- File access happens at local speeds.
- Cloud traffic is WAN optimized.
- Leverage the advantages of the cloud while maintaining local performance.

- Data is secure and never visible to Nasuni or the cloud providers.
- You are in control of all decryption keys.

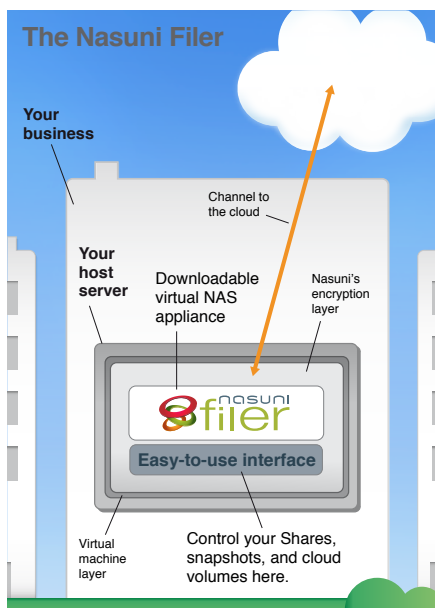

The cloud in a familiar package.

Nasuni brings the benefits of the cloud to businesses quickly, inexpensively, and without disruption to local systems. Installing the Filer into your virtual environment is easy. Setup is simple. No additional hardware is required. The Filer resembles a Windows File Server and supports Active Directory, so you immediately find yourself in a familiar environment.

Nasuni allows you to choose a cloud provider for each volume. The Filer encrypts your files and sends them to the cloud or clouds of your choice. A copy of the working set is cached in your

local infrastructure, giving users the fast access they are used to. Deduped snapshots are sent to the cloud, so files and recent changes are safe and protected with multiple copies.

Our Cloud Storage Providers

"The administrator interface is elegant and easy to use. We are joining the cloud storage revolution, thanks to the Nasuni Filer."

—John DeSouza, Director of Information Technology and Systems, Cressy and Everett Real Estate

Supported Virtualization Platforms

Server Products:

VMware ESX, versions 3.5, 4.0

VMware ESXi, versions 3.5, 4.0

VMware Server version 2

Desktop Products:

VMware Workstation for Windows, versions 6.5, 7.0

VMware Player, versions 2.5, 3.0

Supported Windows Operating Systems

Server:

Windows Server 2003 R2

Windows Server 2003 R2 x64 Edition

Windows Server 2003

Windows Server 2003 x64 Edition

Desktop:

Windows XP

Windows Vista

Windows Vista 64-bit Edition

Windows 7

Windows 7 64-bit Edition

Supported Browsers

Internet Explorer 7, 8

Chrome 3

Firefox 3.0, 3.5

System Configuration Requirements:

Virtualization environment: VMware

ESX, ESXi, Server, or Workstation

Minimum free disk space for appliance: 132GB

Minimum memory on a VM host: 2GB

Nasuni Filer Virtual Machine Memory: 1GB default

Nasuni Filer Virtual Machine Cores: 1 default, 2+ for optimal performance

For an up-to-date list of supported platforms please visit our product documentation page at www.nasuni.com
