

Data Sheet

Nasuni Administrator Training

Gain marketable credentials and expertise in hybrid cloud technology.

Overview

Nasuni's in depth administrator training program is focused on producing highly knowledgeable, technically proficient Nasuni experts within your IT organization.

Education on Nasuni technology, architecture, and integrations as well as help with project planning empower you to deploy Nasuni in multiple sites and support large numbers of users with your own IT resources, while adhering to best practices as you scale.

Is Nasuni Training Right for You?

Nasuni Training is designed for senior IT professionals and enterprise architects who are tasked with ensuring a successful Nasuni implementation. Customers who complete Nasuni Training benefit from accelerated deployments and greater utilization of Nasuni's hybrid cloud platform.

Use Nasuni Training to teach new IT hires, IT professionals absorbed through acquisitions, and new IT departments how to manage Nasuni across multiple business units and locations so that its full business benefits and cost-saving advantages are realized.

The service is also well-suited for IT professionals who want to gain marketable credentials in hybrid cloud technology and distinguish themselves as experts in enterprise file service modernization and digital transformation projects.

How is Training Delivered?

Nasuni Training is a fixed priced service typically delivered on-site over 2 or 3 days.

The program can be tailored for IT organizations charged with carrying out cloud-first initiatives or given corporate mandates to embrace the cloud for strategic purposes.

A Nasuni Certified Professional will work (NCP) with you to customize the curriculum to meet your specific requirements.

"As one of the world's leading industrial services companies with 220+ offices in 20+ countries, Nasuni's implementation service was a big help to us. It enabled us to rapidly implement the solution and adapt our business processes to get the most out of our cloud transformation. Transferring our massive files between the US and Asia is now much easier and more efficient, as is managing our shares and volumes, now that we have a single, centrally managed global file system."

About Nasuni

Nasuni enables enterprises to store and synchronize files across all locations at any scale. Powered by the Nasuni UniFS® global file system, Nasuni file services stores unstructured data in object storage from providers such as Amazon, Dell EMC, IBM, and Microsoft, while caching actively used data wherever it is needed – on-premises or in the cloud – for high performance access. By using Nasuni to collaborate on files across multiple sites and consolidate Network Attached Storage (NAS) and remote office file servers, customers maximize workforce productivity while reducing IT cost and complexity.
