Data Sheet

Nasuni Project Management Service

Plan, schedule, and manage your Nasuni deployment from end-to-end.

Overview

Designed for customers who want Nasuni to assume full project planning, scheduling, and reporting from initial implementation through data migration, Nasuni offers its Project Management Service.

Delivered on-site and remotely, the Nasuni Project Management Service can be a more efficient way to successfully deploy Nasuni enterprise-wide across multiple worldwide locations.

## Is the Nasuni Project Management Service Right for You?

Nasuni's Project Management Service is ideal for customers who want to ensure a successful Nasuni deployment while lessening dependencies and impact on their own IT resources.

The service is also well-suited for customers who don't have in-house resources or experience planning hybrid cloud deployments, enterprise file services, and digital transformation projects.

How is the Service Delivered?

The Nasuni Project Management Service is a variable priced service based on the number of on-site and remote 8-hour blocks purchased.

Your assigned Nasuni Project Manager will review your environment, scope the project, determine how many blocks will be required, and create a project plan.

Professional Services Data Sheet

What's Included

The Nasuni Project Management Service includes:

- Dedicated Nasuni Project Manager who will be the single point of contact for the entire project
- Kickoff call (on-site or remote) for all project team members
- Planning, scheduling, and reporting based on best practices honed from hundreds of other deployments.
- Regularly Scheduled touchpoints to track deliverables and align the team from implementation through data migration
- Reporting on project status
- Project summary document

Requirements

To ensure successful service delivery, we rely on your team to complete all prerequisites prior to service inception.

The service is priced per 8-hour block of remote and on-site time.

The service is based on weekday work only and the service is delivered in English.

About Nasuni

Nasuni enables enterprises to store and synchronize files across all locations at any scale. Powered by the Nasuni UniFS® global file system, Nasuni file services stores unstructured data in object storage from providers such as Amazon, Dell EMC, IBM, and Microsoft, while caching actively used data wherever it is needed – on-premises or in the cloud – for high performance access. By using Nasuni to collaborate on files across multiple sites and consolidate Network Attached Storage (NAS) and remote office file servers, customers maximize workforce productivity while reducing IT cost and complexity.
