Unstructured file data is exploding

Sophisticated environmental data (such as seismic readings), CAD files, and fast-growing volumes of financial and legal information are becoming a burden on legacy storage. Traditional disk storage is too slow and siloed to handle the volume and complexity of this data. The complicated IT infrastructure delays time-to-energy and enterprise integrations, limiting scalability.

Organizations need a modern approach that simplifies IT, enhances CapEx, strengthens business resilience, and enables secure use of AI. The Nasuni File Data Platform unifies data into a single source of truth, creating new levels of control, flexibility, and protection.

Optimized IT efficiency

Traditional enterprise storage can't scale infinitely, provide high performance at multiple global locations, or deliver consistent security across sites. Nasuni's hybrid cloud storage delivers insight-ready data and simplified file management at scale.

- **Unlimited users**, files, volumes, etc.
- **4x faster** post-merger integrations
- **5x acceleration** of multi-location workflows
- **20% reduction** in overwrites and version conflicts

Real-time resilience

Provide business continuity in worst-case scenarios. When disaster strikes, unlimited, immutable Recovery Point Objectives and industry-leading recovery instantly restore operations everywhere.

shutdowns

Maximum cost savings

Data storage shouldn't be a burden. Streamlined infrastructure, actionable intelligence, and AI-ready data pipelines empower organizations to put more resources toward growth.

- **30% storage savings** compared to SaaS alternatives
- **20% reduction on costs** related to over-estimating pre-paid storage
- **Built-in analytics** and business intelligence capabilities
- **Advanced data curation** and analysis for AI applications

*"Nasuni is quite easy.
You set it and forget it."*

— Kristy Caldwell
Infrastructure Engineer

Data storage designed for smoother workflows, stronger resilience, and AI agility

Break free from outdated infrastructure with the only cloud native platform for data and storage services. A fluid approach lets companies connect people and files across remote global locations.

Unified global file system

Secure and streamline IT infrastructure

- Optimized for the cloud
- A single source of truth for all data
- No limits for files, folders, snapshots, and more
- Built-in backups with unlimited versioning
- Integrated disaster recovery
- File restoration in minutes

Industry-leading ransomware protection

Detect and contain threats 24/7

- Monitors for known threats and zero-day attacks
- Automatic mitigation contains threats at the edge
- Guided restore eliminates detective work
- Corrupted files restored in minutes
- Automated reporting

Flexible cloud operating model

Adapt to business and workforce changes at scale

- Compatible with any combination of on-premises, edge, and cloud solutions
- Public and private cloud support
- Enables organizations to avoid vendor lock-in
- Connects with third-party systems that serve data

Intelligent edge cache

Balance global accessibility and local performance

- On-premises or in-the-cloud cache
- Fast read/write to active files
- Dynamic synchronization to all locations
- "Set and forget" data management

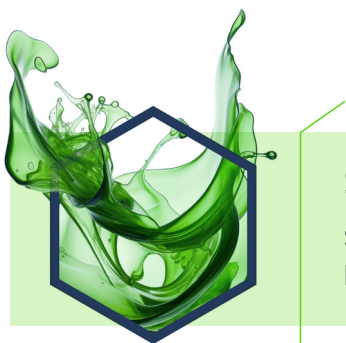

Actionable analytics

Accelerate ROI and lower costs

- Intuitive data intelligence gathering
- Seamless interfacing between AI applications, data, and users
- Insights on resource usage, user behavior, and more

Trusted by leading energy providers

Stop letting subpar storage hurt revenue

Nasuni is a unified file data platform for enterprises facing an explosion of unstructured data, combining storage and data services into a single hybrid cloud solution.

Nasuni's approach enables business resiliency and better data management, while providing solutions that drive IT efficiency – cutting infrastructure costs by up to 65%. The Nasuni File Data Platform replaces friction associated with legacy infrastructure with optimized infrastructure flow, supporting modern enterprise expectations for data analytics and business insights, and helping businesses transform data from obstacle to opportunity.
