Optimize costs on the leading cloud-native file data platform

Move beyond legacy infrastructure with a platform that pays for itself. By consolidating storage, backup, and disaster recovery into one resilient platform, Nasuni reduces IT costs, eliminates refresh cycles, and frees your team to focus on what's next.

Built-in speed, security, and control turn your data into a strategic asset, powering smarter decisions, real savings, and an AI-ready foundation that compounds value over time.

Nasuni is the file data foundation for large enterprises where files are mission-critical for both people and AI. The work that drives modern organizations lives in files, the most operationally critical segment of unstructured data, including designs, project documentation, financial and compliance records, media assets, and the countless versions that evolve across distributed teams.

We help our customers manage, protect, and activate that content so IT can continuously reduce cost and risk, while teams and the AI that supports them become more productive through fast, governed access to the right information when and where they need it.

Unlike tools that focus only on data storage, backup, collaboration, or analytics, Nasuni operates at the source of truth for enterprise files — the foundation enterprise work depends on.
