The Unstructured data foundation for enterprise teams and AI

Legacy storage structures are ill-equipped for connecting engineers and production teams spread across global locations. Manufacturers need a modern approach that simplifies IT infrastructure for more efficient product lifecycles, network defense, and effective use of AI.

The Nasuni File Data Platform unifies data into a single source of truth, creating new levels of flexibility and protection. The modernized approach accelerates time to market, enhances multi-team collaboration, and improves supply chain resiliency.

Optimized IT efficiency

Traditional enterprise storage can't scale infinitely, provide high performance at multiple global locations, or deliver consistent security across sites. Nasuni hybrid cloud storage consolidates file data in easily expandable, highly durable object storage such as Amazon S3, Azure Blob, and Google Cloud at a fraction of the cost of on-premises or other cloud solutions.

- **Unlimited users**, files, volumes, etc.
- **4x faster** post-merger integrations
- **5x acceleration** of multi-location workflows
- **Eliminate version conflicts** with global file locking

Real-time resilience

Protect the entire product lifecycle. When disaster strikes, unlimited, immutable Recovery Point Objectives and industry-leading recovery instantly restore operations everywhere.

**15-minute

**96% quicker
recovery times
after operational
shutdowns**

Maximum cost savings

Data storage shouldn't be a burden. Streamlined infrastructure, actionable intelligence, and AI-ready data pipelines empower organizations to put more resources toward growth.

- **30% storage savings** compared to SaaS alternatives
- **20% reduction on costs** related to over-estimating pre-paid storage
- **Built-in analytics** and business intelligence capabilities
- **Advanced data curation** and analysis for AI applications

"Installing Nasuni appliances globally has resulted in an optimized environment from a cost, efficiency, performance, and security perspective."

— Tony Rubenacker | IT Director

Data storage designed for smoother workflows, stronger resilience, and AI agility

Break free from outdated infrastructure with the only cloud native platform for data and storage services. A fluid approach lets teams extract every bit of value from organizational data, enhancing product lifecycles and supply chain resilience.

Unified global file system

Secure and streamline IT infrastructure

- Optimized for the cloud
- A single source of truth for all data
- No limits for files, folders, snapshots, and more
- Built-in backups with unlimited versioning
- Integrated disaster recovery
- File restoration in minutes

Industry-leading ransomware protection

Detect and contain threats 24/7

- Monitors for known threats and zero-day attacks
- Automatic mitigation contains threats at the edge
- Guided restore eliminates detective work
- Corrupted files restored in minutes
- Automated reporting

Flexible cloud operating model

Adapt to business and workforce changes at scale

- Compatible with any combination of on-premises, edge, and cloud solutions
- Public and private cloud support
- Enables organizations to avoid vendor lock-in
- Connects with third-party systems that serve data

Intelligent edge cache

Balance global accessibility and local performance

- On-premises or in-the-cloud cache
- Fast read/write to active files
- Dynamic synchronization to all locations
- "Set and forget" data management

Actionable analytics

Accelerate ROI and lower costs

- Intuitive data intelligence gathering
- Seamless interfacing between AI applications, data, and users
- Insights on resource usage, user behavior, and more

AI-ready file foundation

Activate the platform you already run

- Pre-query permission enforcement — AI sees only what the user can
- No new data copies or pipelines
- Fully hosted — no AI infrastructure to build
- Grounded in the authoritative file version

Stop letting subpar storage hurt revenue

Nasuni is a unified file data platform for enterprises facing an explosion of unstructured data, combining storage and data services into a single hybrid cloud solution.

Nasuni's approach enables business resiliency and better data management, while providing solutions that drive IT efficiency — cutting infrastructure costs by up to 65%. The Nasuni File Data Platform replaces friction associated with legacy infrastructure with optimized infrastructure flow, supporting modern enterprise expectations for data analytics and business insights, and helping businesses transform data from obstacle to opportunity.
